

FOR IMMEDIATE RELEASE:

Chatham, New Jersey November 13, 2001 - EMC Software today announced the availability of the *Mega-Phonic PC Phone* for integration testing. The *Mega-Phonic PC Phone* enables CLEC and Cable providers to bring Voice over IP Telephony to the windows desktop. Since, existing equipment is used, the carrier will increase revenue significantly with little additional investment.

The *Mega-Phonic PC Phone* brings enhanced POTS telephone service to the Personal Computer using the corporate network, DSL, or Cable Modem simply by running the program and signing up with a Voice over IP (VoIP) Telephone Service Provider.

For the existing customer base, the *Mega-Phonic PC Phone* provides greater value and flexibility by bringing the office phone to anywhere on their VPN or the Internet. This is especially valuable for work at home users and disaster recovery.

The *Mega-Phonic PC Phone* also opens the carrier network to the general broadband market. These customers can utilize the carrier's service and receive attractive toll rates in return. Typically, this market segment's usage pattern complements the existing CLEC customer base and makes use of otherwise idle capacity.

"The *Mega-Phonic PC Phone* is suitable for mass-deployment throughout corporate, cable, and DSL networks because it utilizes the IP protocols designed for the next generation PSTN (public switched Telephone Network)," said Dr. Ed Guy, President and CTO of EMC Software. "Furthermore, the *Mega-Phonic PC Phone* does not require expensive system replacements or upgrades -- it operates on the computer platforms currently deployed in most residences and businesses." EMC Software has enhanced the VoIP service by adding LAN-based features, such as *Click-n-Holler*[™] that simplify office communication.

The *Mega-Phonic PC Phone* supports Windows 98, Windows ME, Windows NT, Windows 2000, Media Gateway Control Protocol (MGCP) RFC 2705, and Real-time Transport Protocol (RTP) RFC 1889.

The program is currently scheduled for general release later this year.

About EMC Software.

EMC Software's expertise and commitment to provide its customers with standards-based, high performance Internet Telephony solutions has made the company an industry leader in VoIP software solutions. EMC Software provides IP Telephony software solutions and consulting for the Enterprise (CPE) & Carrier (CLE) markets. For further information contact us at (425) 988-7783.
